

Magento 2.2.X Shopping Cart Installation Guide

Mandatory Requirements

- PHP version 7+
- cURL
- OpenSSL
- Internet (Installation will not be done without Internet)
- Magento 2.2.x
- Installation can be done only through Cpanel/ FTP.
- Lamp server is compulsory to install the module.
- This module does not support one page checkout template.

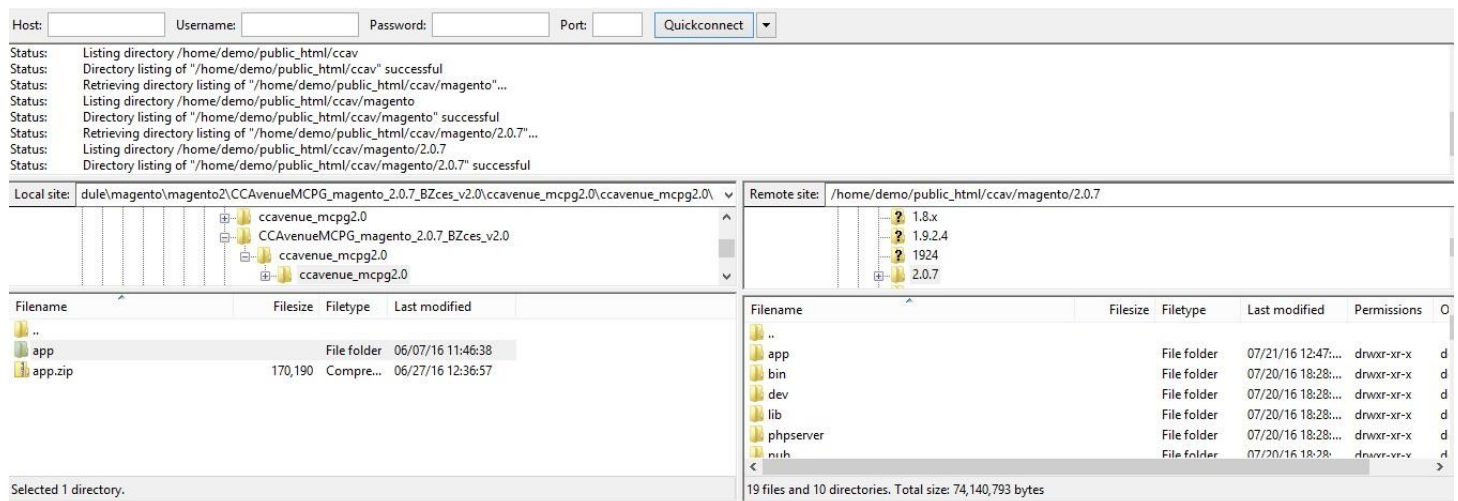

Module Installation Process

Step 1: Install Magento v2.2.1 (minimum version required) on your server.

Step 2: Unzip the “[Magento2-2-x_ccavenue.zip](#)”

Step 3: Upload the “**app**” folder into your Magento root directory through FTP client.

Step 4: You can use FTP Client <http://www.filezilla-project.org> (it is available for free) or any other FTP Client.

The screenshot shows the FileZilla FTP client interface. At the top, there are input fields for Host, Username, Password, and Port, along with a 'Quickconnect' button. Below these, a status bar shows the progress of directory listings. The main area is divided into two panes: 'Local site' and 'Remote site'.

Local site: dule\magento\magento2\CCAvenueMCPG_magento_2.0.7_BZces_v2.0\ccavenue_mcp2.0\ccavenue_mcp2.0\

Remote site: /home/demo/public_html/ccav/magento/2.0.7

The 'Local site' pane shows a directory tree with the following structure:

- ccavenue_mcp2.0
 - CCAvenueMCPG_magento_2.0.7_BZces_v2.0
 - ccavenue_mcp2.0
 - ccavenue_mcp2.0

The 'Remote site' pane shows a directory tree with the following structure:

- 1.8.x
- 1.9.2.4
- 1924
- 2.0.7

Below the panes, there are two tables showing file and directory details.

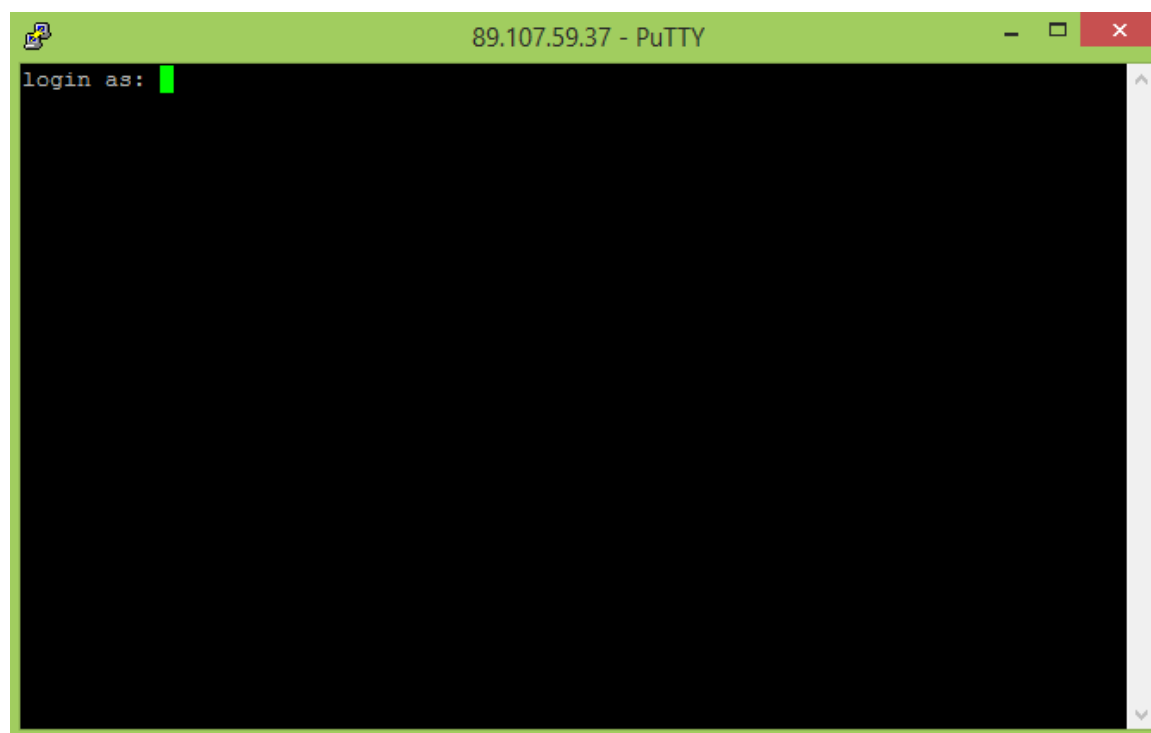

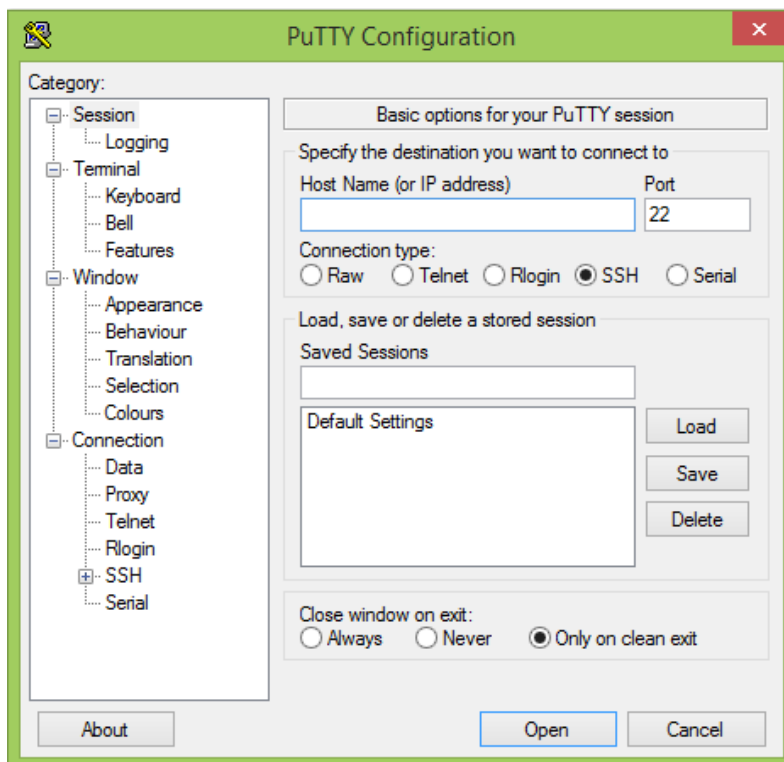

Filename	Filesize	Filetype	Last modified
..			
app		File folder	06/07/16 11:46:38
app.zip	170,190	Compre...	06/27/16 12:36:57

Selected 1 directory.

Filename	Filesize	Filetype	Last modified	Permissions	O
..					
app		File folder	07/21/16 12:47:...	drwxr-xr-x	d
bin		File folder	07/20/16 18:28:...	drwxr-xr-x	d
dev		File folder	07/20/16 18:28:...	drwxr-xr-x	d
lib		File folder	07/20/16 18:28:...	drwxr-xr-x	d
phpserver		File folder	07/20/16 18:28:...	drwxr-xr-x	d
pub		File folder	07/20/16 18:28:...	drwxr-xr-x	d

19 files and 10 directories. Total size: 74,140,793 bytes

Step 5: Once done, you must open Putty Command and login with your SSH Account credentials.

Step 6: Please enter the root path of your Magento store after login through Putty.

Step 7: After successful installation, you would need to run this command on Magento2 root directory **"php bin/magento setup:upgrade"**

```

:~/www/html/magento2/M2$ php bin/magento setup:upgrade
Cache cleared successfully
  
```

You can also run this command in the Magento2 Root: **"php bin/magento setup:static-content:deploy"**. Please refer to the below screenshot.

```

:~/www/html/magento2/M2$ php bin/magento setup:static-content:deploy
  
```

Step 8: After running the command, you need to log into the admin panel and clear the Cache. You can refer to the below screenshot.

Cache Management

Flush Cache Storage [Flush Magento Cache](#)

Refresh 12 records found (12 selected)

[Select all.](#) [Flush cache.](#)

Cache Type	Description	Tags	Status
☒ Configuration	Various XML configurations that were collected across modules and merged.	CONFIG	DISABLED
☒ Layouts	Layout building instructions.	LAYOUT_GENERAL_CACHE_TAG	DISABLED
☒ Blocks HTML output	Page blocks HTML.	BLOCK_HTML	DISABLED
☒ Collections Data	Collection data files.	COLLECTION_DATA	DISABLED
☒ Reflection Data	API interfaces reflection data.	REFLECTION	DISABLED
☒ Database DDL operations	Results of DDL queries, such as describing tables or indexes.	DB_DDL	DISABLED
☒ EAV types and attributes	Entity types declaration cache.	EAV	DISABLED
☒ Integrations Configuration	Integration configuration file.	INTEGRATION	DISABLED
☒ Integrations API Configuration	Integrations API configuration file.	INTEGRATION_API_CONFIG	DISABLED
☒ Page Cache	Full page caching.	FPC	DISABLED
☒ Translations	Translation files.	TRANSLATE	DISABLED
☒ Web Services Configuration	REST and SOAP configurations, generated WSDL file.	WEBSERVICE	DISABLED

Additional Cache Management

[Flush Catalog Images Cache](#) Pregenerated product images files

[Flush JavaScript/CSS Cache](#) Themes JavaScript and CSS files combined to one file.

[Flush Static Files Cache](#) Preprocessed view files and static files

Copyright© 2015 Magento Commerce Inc. All rights reserved. Magento ver. 2.0.0 [Report Bugs](#)

192.168.1.25/magento29/admin/admin/history/index/key/9f...d66ef45797fe02597bdd1fb53cd0c7568a7e04077b21e92ccd8a5/

Step 9: Now, you can navigate to Stores > Configuration > Sales > Payment Methods.

There, you need to configure the installed CCAvenue module with requisite credentials.

The screenshot shows the 'Configuration' page for 'Payment Methods'. On the left is a sidebar with navigation links: DASHBOARD, SALES, PRODUCTS, CUSTOMERS, MARKETING, CONTENT, REPORTS, STORES, SYSTEM, and FIND PARTNERS & EXTENSIONS. The main content area has a 'Save Config' button in the top right. Below the sidebar, there are sections for 'Shipping Methods' (containing 'Google API') and 'Payment Methods'. Under 'Payment Methods', there are two expandable sections: 'SERVICES' and 'ADVANCED'. The 'ADVANCED' section is currently expanded, showing the following configuration options:

- Enabled** [website]: Yes
- Title** [store view]: Payment method (Ccavenuepay)
- Allow Multiple Currency** [store view]: No
- New order status** [store view]: Pending
- Payment Success order status** [store view]: Processing
- Allowed Currencies** [store view]:
 - Indian Rupee (selected)
 - United States Dollar
 - Singapore Dollar
 - Pound Sterling
 - Euro
- Payment Confirmation Mail** [store view]: Yes

Step 10: Now set the Merchant Id, Encryption Key and Access Code provided by CCAvenue for your store module from your CCAvenue Merchant Account.

The screenshot shows the 'API Keys' configuration page in the CCAvenue system. The page has a top navigation bar with links: Orders, Invoice, Products, Store, Marketing Tools, Brand 360°, Reports, and Settings. The main content area is titled 'API Keys' and contains three sections:

- Merchant ID:** This is the identifier for your CCAvenue merchant Account. You must send this with each request. The field 'Merchant_id' is empty.
- Access Code:** This is the access code for your application. You must send this with each request. The field 'Access_code' is empty. The URL 'http://www.demo.bluzzeal.in' is shown.
- Encryption Key:** Below are the secret keys used for encrypting each request originating from your applications. Ensure you are using the correct key while encrypting requests from different URLs registered with us. The field 'Enc_key' is empty. The URL 'http://www.demo.bluzzeal.in' is shown. A 'Regenerate' button is present.

At the bottom of the page, there is a copyright notice: 'Copyright © 2011 - 2014 AVTUTIES. All Rights Reserved.' and a logo for 'PCV DBS'.

Step 11: Before proceeding for payment, please note that as per Magento functionality, 2 status emails will be sent i.e. the first when the transaction is initiated, and the second when the transaction is completed.

So, in order to avoid multiple sales email, you can navigate to Stores > Configuration > Sales > SalesEmails > Order and set the flag to “**No**”.

Now, CCAvenue will send only 1 order confirmation email when the payment is **Successful**.

Step 12: The payment module has been successfully installed. Now, test the newly installed shopping cart at your front end.

Your customers can now enjoy a smooth and seamless experience with CCAvenue.

Thank You!
